

# MODULAR BIN POWERSTRIP ASSEMBLY FOR A VEHICLE

## Abstract

A vehicle overhead module powerstrip assembly (14) includes an overhead attachment strip (40), an electrically conductive strip (44), and a modular connector (48). The overhead attachment strip (40) is configured to couple to a vehicle overhead structure (28). The electrically conductive strip (44) is coupled to the attachment strip (40). The modular connector (48) is configured to couple an overhead electronic module (18) to the electrically conductive strip (44). The modular connector (48) includes electrical contacts (46) that have multiple attachment positions along the electrically conductive strip (40).
